CONDENSED TRAINING EDITION · MICROSOFT 365 COPILOT HANDS-ON EXERCISE

ExxonMobil — 2025 Annual Report (including Form 10-K)

Condensed training edition

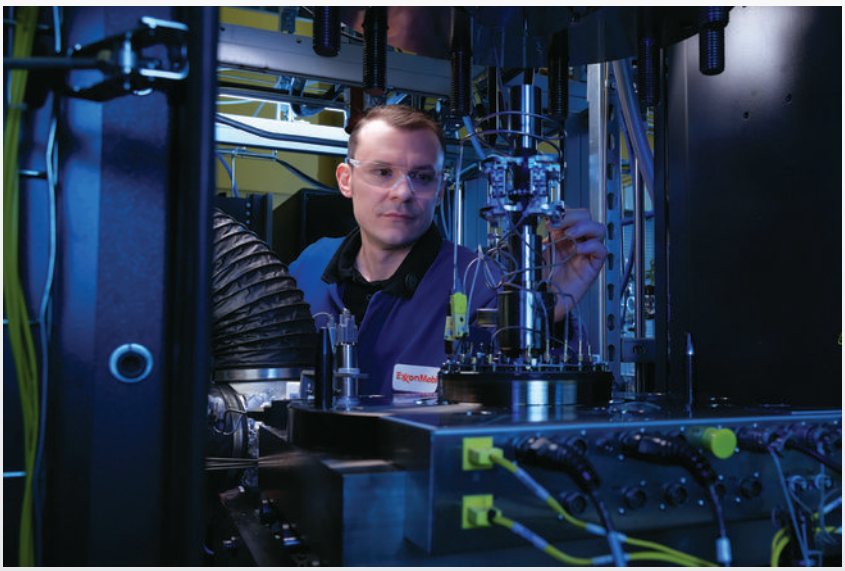

This file contains **selected sections** of the original *ExxonMobil 2025 Annual Report (including Form 10-K)*, reproduced unchanged for a Copilot training exercise (strategic comparison of upstream oil & gas, downstream & refining, LNG / gas, and renewables / new energy). Sections not needed for the exercise (e.g. governance, remuneration, detailed risk factors, sustainability data tables, full notes to the financial statements, legal and glossary pages) have been omitted, and images have been compressed. It is not a complete or official version of the report — refer to the original publication for the full text.

Page references. Every page carries a small grey footer "ExxonMobil 2025 Annual Report · original page N". N is the page number **printed** on the original page: Roman numerals I–V for the opening '2025 year in review' section, and Arabic numbers for the Form 10-K and Financial Section (printed page 1 = PDF page 9 of the original file, so printed N = PDF page − 8; the inside back cover is printed page 139). Original PDF page positions are shown in [brackets] below. When citing, use the original page number from the footer, not the page position in this file.

Section included	Original page(s) [PDF page]	Pages in this file
Front cover	front cover [1]	2
2025 year in review — financial & operating highlights	I [2]	3
Letter to shareholders (Chairman & CEO)	II [3]	4

Product Solutions overview (Energy, Chemical & Specialty Products)	IV [5]	6
Low Carbon Solutions overview	V [6]	7
Form 10-K Item 1 — Business (business segments)	1 [9]	8
Item 2 — Oil & gas production; production prices and costs	12–13 [20–21]	9–10
Item 2 — Refining & chemical capacity; retail fuel sites	21–22 [29–30]	11–12
Financial Section — Business profile by segment (earnings, capital employed, ROCE, cash capex); multi-year financial information	29–30 [37–38]	13–14
Frequently used terms — segment earnings excl. identified items; total cash capex (non-GAAP)	34–35 [42–43]	15–16
MD&A — Business environment: investment needs, progress reducing emissions, recent business environment	41–43 [49–51]	17–19
MD&A — Business results: Upstream (incl. LNG), financial & operational results	44–48 [52–56]	20–24
MD&A — Business results: Energy Products (refining & fuels)	49–51 [57–59]	25–27
MD&A — Business results: Chemical Products	52–53 [60–61]	28–29
MD&A — Business results: Specialty Products; Corporate & Financing	54–57 [62–65]	30–33
MD&A — Liquidity & capital resources (cash flow, capex by segment, 2026 capex plan)	58–59 [66–67]	34–35
Consolidated statement of income	71 [79]	36
Note 3 — Disclosures about segments (2025 segment results)	80–81 [88–89]	37–38
Corporate Plan reconciliations and front-section endnotes (2030 targets)	133–135 [141–143]	39–41
Inside back cover — 'In a league of our own': Corporate Plan through 2030	139 [147]	42

Original document: 1b_Exxon Annual Report.pdf (148 PDF pages). This edition: 41 selected pages + this cover. Text on the original pages remains selectable and searchable. The original front-section pages (cover, I–V and 139) used fonts without a character map, so their text extracted as garbled symbols; a character map (ToUnicode) has been added to those fonts so the text now extracts correctly — the visible content is unchanged.

ExxonMobil

2025 Annual Report

2025 year in review

Financial and operating performance

$28.8B
earnings

$52B
cash flow from operations, strengthening financial resilience

$15.1B
cumulative structural cost savings since 2019, more than all other IOCs combined[1]

$37.2B
distributed to shareholders via dividends and share repurchases in 2025

~29%
total annualized shareholder returns over the past five years, leading all IOCs[1]

~11%
average return on capital employed since 2019, leading all IOCs[1]

Transformation continues delivering stronger earnings power– putting us in **a league of our own**

Delivering strong operational performance and advantaged growth

- Sustained industry-leading safety performance[2,3,4]
- Annual production of 4.7 Moebd, highest in >40 years, with record production from advantaged assets in the Permian and Guyana
- Achieved 2030 plans for Corporate greenhouse gas emissions and flaring intensity reductions[5]

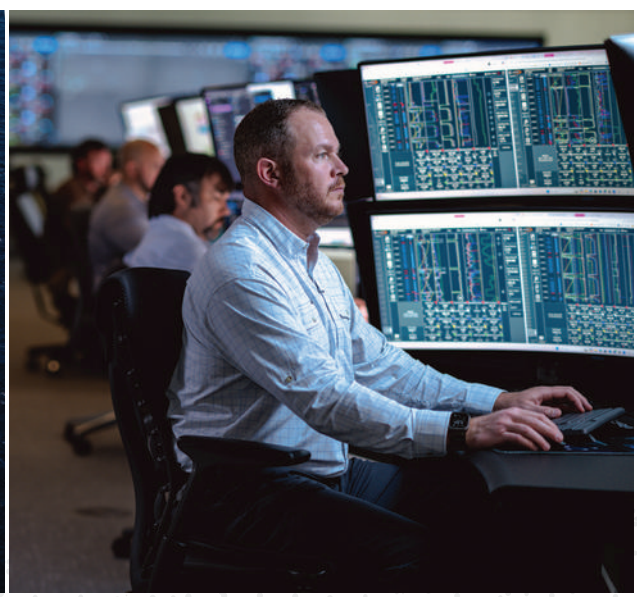

Investing in unmatched opportunities in traditional and new businesses

- Increased annual Pioneer synergies to ~$4B; double initial estimates[6]
- ~9 MTA of CO_2 under contract with third-party customers, underpinned by world's first large-scale end-to-end CCS system[7]
- Started up Singapore resid upgrade project, where we are using new-to-the-world, proprietary technology to convert low-value fuel oil into high-value products

Driving leading long-term shareholder returns

- Total distributions of ~$150B over last five years, more than all but five companies in the S&P 500[8]
- Industry-leading return on capital employed, with plans to grow to >17% by 2030[9]
- Raised 2030 earnings and cash flow growth plans by ~$5B each, with no increase in capital spending[10]

About the cover: Testing Lab, Houston Campus (front top left), China Chemical Complex (front lower left), tower inspection in the Permian Basin (front right). Prosperity FPSO offshore Guyana (back top), remote well operations monitoring at Houston Campus (back lower left), and LaBarge CCS, Wyoming (back lower right).

See supplemental information for footnotes, reconciliations, definitions, and cautionary statement beginning on page 131 in this report.

To our shareholders

For more than a century, ExxonMobil has been growing shareholder value across a variety of market conditions. The transformation we have driven over the past several years builds on our foundation of core competitive advantages, strengthening our position and improving earnings and cash flow power. The steadily improving progress sets us apart and gives us confidence in continuing to deliver shareholder value far into the future.

In 2025, we leveraged our competitive advantages, built over decades, more consistently and at greater scale across our operations. As a result, we delivered $3.0 billion in structural cost savings.[1] Since 2019, we have achieved $15.1 billion in cumulative structural cost savings – exceeding all other IOCs combined.[2]

Our portfolio is the strongest in the industry, with a mix that is becoming even more advantaged. In the Upstream, growth in the Permian Basin, Guyana, and LNG continues to improve our portfolio mix while lowering cost of supply and delivering higher returns. In Product Solutions, we continue upgrading our portfolio toward high-value products to improve margins and ensure strong cash generation through market cycles.

Progress at this scale requires consistent execution, a defining ExxonMobil strength. In 2025, we delivered all 10 key projects scheduled for the year, setting a new benchmark for project execution.[3]

We are extending these strengths into new growth platforms. Our Proxxima™ resin systems and carbon materials businesses provide unique solutions in high-value markets. Our Low Carbon Solutions business is providing industrial customers with options to affordably reduce emissions, utilizing the world's first large-scale end-to-end CCS system.[4]

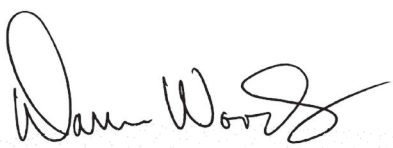

The financial benefits of our transformation are clear. Our earnings, cash flow, and returns remain among the strongest in the industry. In 2025, we generated earnings of $28.8 billion and cash flow from operations of $52 billion. Over the past five years, ExxonMobil has delivered industry-leading total shareholder returns, supported by strong cash generation and disciplined investment decisions.[5]

Our straightforward capital allocation framework has stood the test of time. We invest in advantaged opportunities, maintain financial strength, and share our success with our shareholders. During the year, we distributed $37 billion to our shareholders through dividends and share repurchases.

ExxonMobil has always adapted to meet society's needs. Today our portfolio is stronger, our product mix is more valuable, and our competitive advantages are stronger – putting us in an ideal position to create durable value for our shareholders.

None of this would be possible without the dedication and professionalism of our people worldwide. Their focus on safety, reliability, innovation, and execution excellence is the foundation of our success. It is the reason ExxonMobil continues to deliver for shareholders and the communities we serve.

Thank you for your continued confidence in us.

Darren W. Woods
Chairman and CEO

Upstream

Our Upstream portfolio – made up of high-return, low-cost-of-supply assets – is the strongest in the industry.[1] We continue to strengthen it through disciplined optimization; proprietary, cutting-edge technology innovation; and execution excellence. In 2025, our full-year Upstream unit earnings were more than double 2019 levels, excluding identified items and on a constant price basis,[2] with a growing share coming from our advantaged assets in the Permian Basin, Guyana, and LNG.

In the Permian Basin, production again set records, exceeding 1.6 million oil-equivalent barrels per day. Our proprietary lightweight proppant technology is delivering up to 20% higher recovery while reducing costs. It is one of more than 40 potentially overlapping technologies we are testing with the goal of doubling resource recovery from each new well.

In Guyana, we are continuing to build one of the industry's most advantaged growth platforms. In 2025, we marked 10 years since our first discovery in the Stabroek block and made the final investment decision for our seventh deepwater development. Gross annual production topped 700,000 barrels of oil per day, and our industry-leading projects[3] continue to bring meaningful benefits to the Guyanese economy. More than two-thirds of the country's oil and gas workforce are now Guyanese, and thousands of local businesses support our operations.

Liquified natural gas remains an important part of our Upstream portfolio. With multiple projects advancing, we expect LNG sales to surpass 40 million metric tons per year by 2030. On the U.S. Gulf Coast, the Golden Pass LNG facility achieved mechanical completion in late 2025, with first sales in early 2026.

Global demand for reliable and affordable energy continues to grow, and our Upstream business plays a critical role in meeting that need.

At the same time, we are reducing emissions intensity. In 2025, we had the highest production in over 40 years. We beat our 2030 emission reduction plan for our Upstream operations – with GHG intensity down by more than 40% vs. 2016 levels.[4]

59% of production

from advantaged assets in the Permian Basin, Guyana, and LNG – up ~7% since 2024

3 major developments

advanced in Guyana, Brazil, and the U.S.

Product Solutions

Our Product Solutions business makes products that support modern life – from fuels and lubricants to packaging, medical supplies, and mobile devices. These products help make food safer, health care more accessible, and global mobility possible.

In 2025, we achieved record high-value product sales[1] and continued to grow in specialty markets. Mobil 1™ remained one of the best-selling fully synthetic motor oils in the world. Technology continued to drive our growth, with innovations such as Proxxima™ resin systems and advanced carbon materials opening new higher-margin markets beyond traditional fuels and chemicals.[2]

Proxxima™ resin systems deliver strength and durability superior to steel, while lowering lifecycle GHG emissions by up to 60% compared to epoxy alternatives.[3] Our carbon materials technology enables next-generation batteries with up to 30% greater capacity, 30% faster charging, and up to four times longer battery life. Together, these advances position us to lead in EV and energy storage solutions.

At our Baytown complex, we more than doubled advanced recycling capacity with startup of our second and third facilities, strengthening our ability to process plastic waste at scale. Altogether, these facilities have processed more than 145 million pounds of plastic waste to date. This year, we expect to reach an annual advanced recycling capacity of ~450 million pounds per year, roughly the weight of 25 Eiffel Towers. Without this technology, much of this plastic would wind up in landfills.

In 2025, we started up new major projects in Canada, China, Singapore, the United Kingdom, and the United States.

Projects included the China Chemical Complex, a wholly owned, world-scale cracker complex, delivered at industry-leading pace,[4] as well as the Singapore resid upgrade project, which uses new proprietary technologies to convert low-value residue into high-value lubricants and fuels.

We are the world's largest polyethylene producer, and our refining footprint is twice the scale of other integrated oil companies. About 70% of our manufacturing sites serve all three Product Solutions businesses (Energy Products, Chemical Products, and Specialty Products), capitalizing on our competitive advantages of scale and integration.

Continuous innovation to meet society's changing needs gives our Product Solutions portfolio a long runway of profitable growth – one that no competitor can match.

6 strategic projects delivered

demonstrating execution excellence and increasing high-value product sales capacity[5]

>250 million lbs.

capacity of our advanced recycling, with two new Baytown units started up

Low Carbon Solutions

Meaningfully reducing carbon emissions requires scalable technologies and significant investment.

Our competitive advantages and core capabilities allow us to scale lower-emission energy solutions through our Low Carbon Solutions business. These solutions help hard-to-decarbonize industries reduce emissions. We are deploying technologies to capture, transport, and store CO_2. At the same time, we are developing lithium supply with fewer environmental impacts than traditional mining,[1] extending capabilities developed in our traditional businesses into new lower-emission markets.

We manage the largest integrated CCS system in the world – about 1,300 miles – with contracts in place to transport and store approximately nine million metric tons each year, the most in the industry.[2] In 2025, we started up our first Gulf Coast CCS project with CF Industries, marking a major milestone for our business. Partnerships with steel producers, industrial gas producers, and natural gas processors continue to expand our reach across hard-to-abate sectors.

We also expect to reach final investment decision by the end of 2026 on our first CCS project supporting a low-carbon data center.

This follows ongoing work with hyperscalers and power providers as demand for low emissions power and infrastructure is accelerating to support AI development.

In November, we signed a joint development agreement with BASF to advance the commercialization of low-emission hydrogen production through methane pyrolysis. This

technology could become one of the most cost-effective ways to produce low-carbon hydrogen. Also during the year, we expanded our leading lithium acreage position in Arkansas' Smackover formation, where we now have the industry's largest contiguous, high-quality deep brine resource.[3]

We have built a Low Carbon Solutions business at scale that few companies can match. Investment in these emerging markets remains disciplined and demand-driven, and projects move forward only when they deliver returns that are competitive across our portfolio.

~9 MTA of carbon emissions

contracted.[4] Early and substantial lead leveraging unmatched assets and capabilities; focused on the most profitable opportunities with the strongest market uptake

70% of our CCS pipelines

located in U.S. Gulf Coast, which is home to ~1/3 of U.S. industrial emissions

PART I

ITEM 1. BUSINESS

Exxon Mobil Corporation was incorporated in the State of New Jersey in 1882. Divisions and affiliated companies of ExxonMobil operate or market products in the United States and most other countries of the world. Our principal business involves exploration for, and production of, crude oil and natural gas; manufacture, trade, transport and sale of crude oil, natural gas, petroleum products, petrochemicals, and a wide variety of specialty products; and pursuit of lower-emission and other new business opportunities, including carbon capture and storage, hydrogen and ammonia, lower-emission fuels, Proxxima™ resin systems, carbon materials, low-carbon data centers, and lithium. Affiliates of ExxonMobil conduct extensive research programs in support of these businesses.

Exxon Mobil Corporation's divisions and affiliates have many names, including *ExxonMobil*, *Exxon*, *Esso, Mobil* or *XTO*. For convenience and simplicity, in this report the terms *ExxonMobil, Exxon, Esso, Mobil, and XTO*, as well as terms like *Corporation*, *Company*, *our*, *we,* and *its*, are sometimes used as abbreviated references to specific affiliates or groups of affiliates. The precise meaning depends on the context in question.

The energy and petrochemical industries are highly competitive, both within the industries and also with other industries in supplying the energy, fuel, and chemical needs of industrial and individual consumers. Certain industry participants, including ExxonMobil, are expanding the scope of investments in lower-emission energy and emission-reduction services and technologies. The Corporation competes with other firms in the sale or purchase of needed goods and services in many national and international markets and employs all methods of competition which are lawful and appropriate for such purposes.

Operating data and industry segment information for the Corporation are contained in the Financial Section of this report under the following: “Management's Discussion and Analysis of Financial Condition and Results of Operations: Business Results” and Note 3. Information on oil and gas reserves is contained in the “Oil and Gas Reserves” part of the “Supplemental Information on Oil and Gas Exploration and Production Activities” portion of the Financial Section of this report.

ExxonMobil has a long-standing commitment to the development of proprietary technology. We have a wide array of research programs designed to meet the needs identified in each of our businesses. ExxonMobil held over 8 thousand active patents worldwide at the end of 2025. Although technology is an important contributor to the overall operations and results of our Company, the profitability of each business segment is not dependent on any individual patent, trade secret, trademark, license, franchise, or concession.

ExxonMobil operates in a highly complex, competitive, and changing global energy business environment where decisions and risks play out over time horizons that are often decades in length. This long-term orientation underpins the Corporation's philosophy on talent development.

Talent development begins with recruiting exceptional candidates and continues with individually planned experiences and training designed to facilitate broad development and a deep understanding of our business across the business cycle. Our career-oriented approach to talent development results in strong retention and an average length of service of about 30 years for our career employees. Compensation, benefits, and workplace programs support the Corporation's talent management approach, and are designed to attract and retain employees for a career through compensation that is market competitive, long-term oriented, and highly differentiated by individual performance.

With over 59 percent of our global employees from outside the U.S. and more than 160 nationalities represented across the Company, we encourage and respect diversity of thought, ideas, and perspective from our workforce. We are focused on building an engaged, global workforce; grounded in meritocracy, we strive to have every employee reach their potential over a long-term career by providing unrivaled opportunities for personal and professional growth through impactful work meeting society's essential needs.

The number of regular employees was 58 thousand, 61 thousand, and 62 thousand at years ended 2025, 2024, and 2023, respectively. Regular employees are defined as active executive, management, professional, technical, administrative, and wage employees who work full time or part time for the Corporation and are covered by the Corporation’s benefit plans and programs.

As discussed in Item 1A in this report, compliance with existing and potential future government regulations, including taxes, environmental regulations, and other government regulations and policies that directly or indirectly affect the production and sale of our products, may have material effects on the capital expenditures, earnings, and competitive position of ExxonMobil. For additional information on the Corporation's worldwide environmental expenditures, see "Management's Discussion and Analysis of Financial Condition and Results of Operations: Environmental Matters" in the Financial Section of this report.

Information concerning the source and availability of raw materials used in the Corporation’s business, the extent of seasonality in the business, the possibility of renegotiation of profits or termination of contracts at the election of governments, and risks attendant to foreign operations may be found in Item 1A and Item 2 in this report.

3. Oil and Gas Production, Production Prices and Production Costs

A. Oil and Gas Production

The table below summarizes production by final product sold and by geographic area for the last three years.

(thousands of barrels daily)	2025		2024		2023	
	Crude Oil	NGL	Crude Oil	NGL	Crude Oil	NGL
Crude oil and natural gas liquids production						
Consolidated Subsidiaries						
United States	1,005	514	862	383	556	238
Canada/Other Americas [1]	381	1	346	2	240	2

Total crude oil and natural gas liquids production	**2,262**	**612**	**2,068**	**483**	**1,682**	**345**
Bitumen production						
Consolidated Subsidiaries						
Canada/Other Americas	385		374		355	
Synthetic oil production						
Consolidated Subsidiaries						
Canada/Other Americas	68		62		67	
Total liquids production	**3,329**		**2,987**		**2,449**	
(millions of cubic feet daily)						
Natural gas production available for sale						
Consolidated Subsidiaries						
United States	3,346		2,869		2,292	
Canada/Other Americas [1]	27		101		96	
Europe	228		252		266	
Africa	2		45		35	
Asia	968		907		915	
Australia/Oceania	1,283		1,264		1,298	
Total Consolidated Subsidiaries	5,854		5,438		4,902	
Equity Companies						
United States	18		18		19	
Europe	71		100		148	
Africa	112		107		90	
Asia	2,386		2,415		2,575	
Total Equity Companies	2,587		2,640		2,832	
Total natural gas production available for sale	**8,442**		**8,078**		**7,734**	
(thousands of oil-equivalent barrels daily)						
Oil-equivalent production	**4,736**		**4,333**		**3,738**	

[1] Other Americas includes crude oil production for 2025, 2024, and 2023 of 320 thousand, 285 thousand, and 178 thousand barrels daily, respectively; and natural gas production available for sale for 2025, 2024, and 2023 of 4 million, 76 million, and 67 million cubic feet daily, respectively.

Due to rounding, numbers presented may not add up precisely to the totals indicated.

B. Production Prices and Production Costs

The table below summarizes average production prices and average production costs by geographic area and by product type for the last three years.

(dollars per unit)	United States	Canada/ Other Americas	Europe	Africa	Asia	Australia/ Oceania	Total
2025							
Consolidated Subsidiaries							
Average production prices							
Crude oil, per barrel	63.19	67.75	63.24	69.20	68.26	66.21	65.64

Information with regard to refining and chemical capacity:

ExxonMobil manufactures, trades, and sells petroleum and petrochemical products. Our refining and chemical operations are highly integrated and encompass a global network of manufacturing plants, transportation systems, and distribution centers that provide a range of fuels, specialty products, feedstocks, olefins, polyolefins, and a wide variety of other products to our customers around the world.

■ Energy Products ▲ Specialty Products ● Chemical Products

[1] ExxonMobil share reflects 100 percent for operations of ExxonMobil and majority-owned subsidiaries. For companies owned 50 percent or less, ExxonMobil share is the greater of ExxonMobil's interest or that portion of distillation capacity normally available to ExxonMobil.

[2] Refining capacity data is based on 100 percent of rated refinery process unit stream-day capacities to process inputs to atmospheric distillation units under normal operating conditions, less the impact of shutdowns for regular repair and maintenance activities, averaged over an extended period of time. The listing excludes refining capacity for a minor interest held through equity securities in the Laffan Refinery in Qatar for which results are reported in the Upstream segment.

[3] The Corporation announced the planned closure of the Fife Ethylene Plant, with shutdown activities expected to be completed in 2026.

Due to rounding, numbers presented above may not add up precisely to the totals indicated.

Information with regard to retail fuel sites:

Within the Energy Products segment, retail fuels sites sell products and services throughout the world through our *Exxon*, *Esso,* and *Mobil* brands.

[(1)] Includes non-cash additions. See Note 20 for additions resulting from the Pioneer acquisition in 2024.

[(2)] Net debt is total debt less cash and cash equivalents excluding restricted cash. Net debt to capital ratio is net debt divided by net debt plus total equity. Total debt is the sum of notes and loans payable and long-term debt, as reported in the Consolidated Balance Sheet.

[(3)] Regular employees are defined as active executive, management, professional, technical, administrative, and wage employees who work full time or part time for the Corporation and are covered by the Corporation's benefit plans and programs.

FREQUENTLY USED TERMS

Earnings (loss) excluding Identified Items (Non-GAAP)

Earnings (loss) excluding Identified Items are earnings (loss) excluding individually significant non-operational events with, typically, an absolute Corporate total earnings impact of at least $250 million in a given quarter. The earnings (loss) impact of an identified item for an individual segment in a given quarter may be less than $250 million when the item impacts several periods or several segments. Earnings/(loss) excluding Identified Items does include non-operational earnings events or impacts that are generally below the $250 million threshold utilized for identified items. Management uses these figures to improve comparability of the underlying business across multiple periods by isolating and removing significant non-operational events from business results. The Corporation believes this view provides investors increased transparency into business results and trends and provides investors with a view of the business as seen through the eyes of management. Earnings (loss) excluding Identified Items is not meant to be viewed in isolation or as a substitute for net income (loss) attributable to ExxonMobil as prepared in accordance with U.S. GAAP.

References in this discussion to Corporate earnings (loss) mean net income (loss) attributable to ExxonMobil (U.S. GAAP) from the Consolidated Statement of Income. Unless otherwise indicated, references to earnings (loss), Upstream, Energy Products, Chemical Products, Specialty Products, and Corporate and Financing earnings (loss), and earnings (loss) per share are ExxonMobil's share after excluding amounts attributable to noncontrolling interests.

Due to rounding, numbers presented may not add up precisely to the totals indicated.

Cash Capital Expenditures (Non-GAAP)

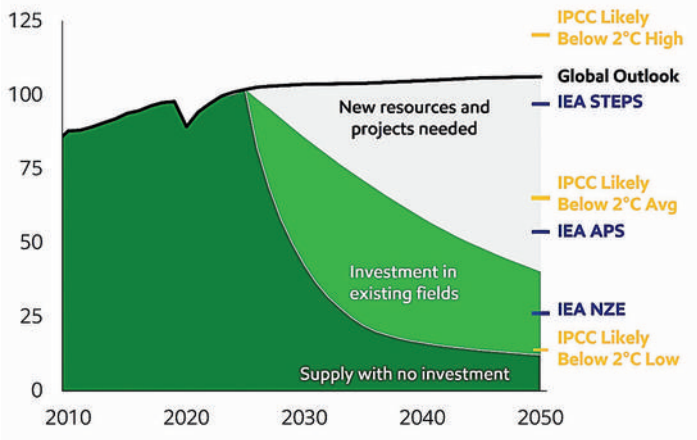

Cash capital expenditures (Cash Capex) are the sum of additions to property, plant, and equipment; additional investments and advances; and other investing activities including collection of advances; reduced by inflows from noncontrolling interests for major projects, each from the Consolidated Statement of Cash Flows. The Company believes it is a useful measure for investors to understand the cash impact of investments in the business, which is in line with industry practice.

Significant oil and natural gas investment needed to meet projected global demand

Projected global oil supply and demand

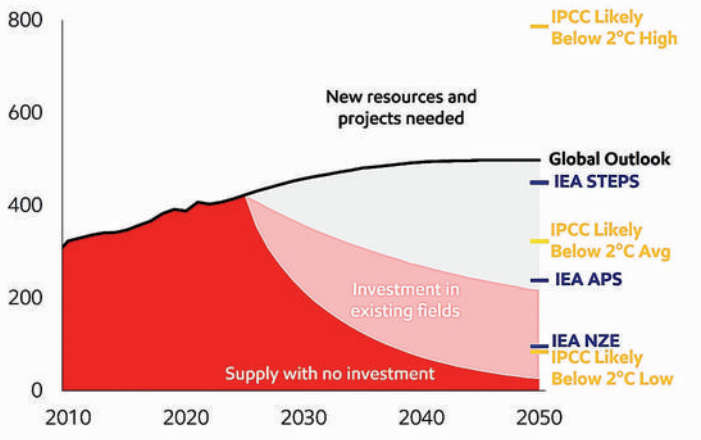

Million barrels per day

Excludes biofuels; IEA STEPS and IEA NZE Source: IEA WEO 2025; IEA APS Source: IEA WEO 2024; Global Outlook Source: ExxonMobil 2025 Global Outlook; IPCC Likely Below 2°C Average Source: IPCC AR6 Scenarios Database hosted by IIASA release 1.0 average IPCC C3:311 "Likely below 2°C" scenarios used; decline rates based on 10-yr Compound Annual Grown Rate (CAGR)

Projected global natural gas supply and demand

Billion cubic feet per day

Excludes flaring; IEA STEPS and IEA NZE Source: IEA WEO 2025; IEA APS Source: IEA WEO 2024; Global Outlook Source: ExxonMobil 2025 Global Outlook; IPCC Likely Below 2°C Average Source: IPCC AR6 Scenarios Database hosted by IIASA release 1.0 average IPCC C3: 311 "Likely below 2°C" scenarios used; decline rates based on 10-yr CAGR

Our Outlook projects that oil demand will remain above 100 million barrels per day to 2050. Even under the average of IPCC Likely Below 2°C scenarios, oil demand still comes to 65 million barrels per day in 2050 – about two thirds of current consumption.

Our Outlook shows oil production declines at a rate of about 15 percent per year. At that rate, in the absence of continued investment, by 2030 oil supplies would fall from 100 million barrels per day to less than 30 million barrels, more than 70 million barrels per day short of what is needed to meet demand. Limiting investment to only existing fields would slow the decline to about 4 percent; however, this would still be well below the oil demand in the average of IPCC Likely Below 2°C scenarios.

To meet projected demand, the Corporation anticipates that the world's available oil and gas resource base will grow, not only from new discoveries, but also from increases in previously discovered fields. Technology will underpin these increases. The investments to develop and supply resources to meet global demand through 2050 will be significant and would be needed to meet even rapidly declining demand for oil and gas envisioned in aggressive decarbonization scenarios.

International accords and underlying regional and national regulations covering greenhouse gas emissions continue to evolve with uncertain timing and outcome, making it difficult to predict their business impact. For many years, the Corporation has taken into account policies established to reduce energy-related greenhouse gas emissions in its long-term Outlook. The climate accord reached at the 2015 Conference of the Parties (COP 21) in Paris set many new goals, and many related policies are still emerging. Our Outlook reflects an environment with increasingly stringent climate policies and seeks to identify potential impacts of these climate-related government policies, which often target specific sectors. For purposes of the Outlook, a proxy cost on energy-related CO2 emissions is assumed, based on regional considerations and relative levels of economic development, and by 2050, reaches up to $150 per metric ton for OECD nations and up to $100 per metric ton for non-OECD nations. As people and nations look for ways to reduce risks of global climate change, they will continue to need practical solutions that do not jeopardize the affordability or reliability of the energy they need. The Corporation continues to monitor the updates to the Nationally Determined Contributions (NDCs) that are submitted by nations that are signatories to the Paris Agreement, as well as other policy developments in light of net-zero ambitions formulated by some nations.

The information provided in the Outlook includes ExxonMobil's internal estimates and projections based upon internal data and analyses as well as publicly available information from external sources including the International Energy Agency.

Progress Reducing Emissions

The Corporation's strategy seeks to maximize the advantages of our scale, business integration, leading technology, execution excellence, and our people to build globally competitive businesses that lead industry in earnings and cash flow growth across a range of future scenarios. We strive to play a leading role, regardless of how an energy transition unfolds. Across our portfolio of opportunities, we retain investment flexibility to maximize shareholder value. In 2022, we announced our ambition to achieve net-zero Scope 1 and 2 greenhouse gas emissions in our operated assets by 2050, with advancements in technology and clear, consistent, stable, and effective government policies. Society's progress continues to lag in these areas. Without supportive policies and the innovations they drive, net zero 2050 will remain out of reach — for society and ExxonMobil. Our net-zero ambition is backed by a comprehensive approach centered on detailed emission-reduction roadmaps for our major operated assets that were completed in 2022. The roadmaps build on the Company's 2030 emission-intensity reduction plans. We continue to update the roadmaps, including to account for portfolio changes, to reflect technology and policy, and to account for the many potential pathways and pace of an energy transition. Our plans include reaching net-zero Scope 1 and 2 emissions in our integrated Permian Basin operated assets by 2035, including Pioneer assets acquired in 2024. By 2030, we plan to reduce emissions in our combined Permian operations by more than the equivalent of achieving net-zero Scope 1 and 2 emissions in our operated heritage ExxonMobil assets.

Compared to 2016 levels, our 2030 plans are expected to drive the following reductions:

- 20-30 percent reduction in corporate-wide greenhouse gas intensity;
- 70-80 percent reduction in corporate-wide methane intensity;
- 40-50 percent reduction in upstream greenhouse gas intensity; and
- 60-70 percent reduction in corporate-wide flaring intensity.

As of year-end 2025, we are exceeding our 2030 plans across the portfolio, having already achieved our plans for reducing Corporate greenhouse gas and flaring intensity. We expect to reach the plan for methane intensity reductions later this year.

Our emission-reduction plans and 2050 net-zero ambition cover Scope 1 and 2 emissions from assets we operate.

The Corporation plans to continue to pursue advantaged growth opportunities and lower-emission investments. These investments are targeted at reducing emissions in the Company's operations as well as reducing the emissions of other companies. At this early stage, stable and supportive policy remains critical to enable emissions reductions, advance technology, and drive scale to improve costs.

ExxonMobil's Low Carbon Solutions business is working with the Product Solutions and Upstream businesses to grow a pipeline of emission-reduction opportunities in carbon capture and storage, hydrogen and ammonia, lower-emission fuels, Proxxima™ resin systems, carbon materials, and low-carbon data centers, as well as lithium to supply the global battery and electric vehicle markets. Our customers, many governments, and strategic partners recognize our combination of experience, skills, and capabilities that have the potential to help reduce emissions for ourselves and others. For example, on the U.S. Gulf Coast, we see an opportunity to grow a carbon capture and storage business that will enable industrial customers to reduce their emissions. Stable policy support, along with technology advancements and the development of market-driven mechanisms, will continue to be important to the development and deployment of lower-emission solutions.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Recent Business Environment

During 2025, the price of crude oil remained near the middle of the pre-COVID 10-year range (2010-2019) as global markets remained broadly balanced. Record crude demand was met by increasing industry supply, resulting in modestly lower prices. Natural gas prices rose to the top end of the 10-year range due to robust demand. Industry refining margins improved in 2025, supported by record full-year demand and an increase in supply disruptions driving higher margins. Despite record demand, global oversupply resulted in Chemical margins remaining at bottom-of-cycle.

During 2025, the U.S. announced a variety of trade-related actions, including the imposition of tariffs on imports from several countries. In response, many countries announced their own retaliatory tariffs. Despite the current uncertainty as to what effects these actions will ultimately have on the Corporation, our suppliers and our customers, as well as on the overall macroeconomic environment, we do not anticipate any material near-term financial impacts.

The Corporation closely monitors market trends and works to mitigate both operating and capital cost impacts in all price environments. Strategic changes implemented over the past several years enabled the Corporation to capture $15.1 billion of structural cost savings[(1)] versus 2019, including $3 billion of savings during 2025, through increased operational efficiencies, workforce reductions, divestment-related reductions, and other cost-saving measures. The Company sees additional opportunities in areas such as centralization of activities, system implementations, continued improvement of maintenance and turnarounds, and simplified business processes. These savings are key drivers to reduce our structural costs by $20 billion between 2019 and 2030, thereby improving the earnings power of the Corporation.

(1) Refer to Frequently Used Terms for definition of structural cost savings.

Transportation of Kazakhstan Production

The Corporation holds a 25 percent interest in Tengizchevroil, LLP (TCO), which operates the Tengiz and Korolev oil fields in Kazakhstan, and a 16.8 percent working interest in the Kashagan field in Kazakhstan. Oil production from those operations is exported primarily through the Caspian Pipeline Consortium (CPC), in which the Corporation holds a 7.5 percent interest. CPC traverses parts of Kazakhstan and Russia to tanker-loading facilities on the Russian coast of the Black Sea. In the event geopolitical issues escalate in the region, including ongoing military conflict, it is possible that the transportation of Kazakhstan oil through the CPC pipeline could be disrupted, curtailed, temporarily suspended, or otherwise restricted. In such a case, the Corporation could experience a loss of cash flows of uncertain duration from its operations in Kazakhstan. For reference, after-tax earnings related to the Corporation's interests in Kazakhstan in 2025 were approximately $1.1 billion, and its share of combined oil and gas production was approximately 320 thousand oil-equivalent barrels per day.

BUSINESS RESULTS

Upstream

ExxonMobil has a diverse growth portfolio of exploration and development opportunities, which allows the Corporation to be selective in our investments, maximizing shareholder value, and mitigating political and technical risks. ExxonMobil's competitive strengths enable the Upstream's business strategy, which is focused on developing an industry-leading portfolio underpinned by advantaged growth projects, applying ExxonMobil's technology to enhance value and improve development efficiency, and leveraging the unique capabilities of the Company's Global Projects organization to deliver projects on time and in line with budgets.

The Upstream capital program is focused on low cost-of-supply opportunities. ExxonMobil has a strong pipeline of development projects, including continued growth in Guyana and the Permian Basin, as well as LNG expansion opportunities in Qatar, Mozambique, Papua New Guinea, and the United States. In 2025, Upstream production averaged 4.7 million oil-equivalent barrels per day (Moebd), our highest production in over 40 years. As future development projects and drilling activities bring new production online, the Corporation expects a shift in the geographic mix and in the type of opportunities from which volumes are produced. Based on the current investment plans, the proportion of oil-equivalent production from the Americas is generally expected to increase over the next several years. Currently about two thirds of the Corporation's global production comes from Permian, Guyana, and LNG resources. This proportion is generally expected to grow.

The Corporation anticipates several projects will come online over the next few years providing additional production capacity. However, actual volumes typically vary from year to year due to the timing of individual project start-ups, operational outages, reservoir performance, regulatory changes, the impact of fiscal and commercial terms, asset sales, weather events, price effects on production sharing contracts, changes in the amount and timing of capital investments that may vary depending on the oil and gas price environment, international trade patterns and relations, and other factors described in Item 1A.

In 2025, crude prices remained within the 10-year historical range (2010-2019), while robust demand helped to move natural gas price above the top of the 10-year range. ExxonMobil believes prices over the long term will continue to be driven by market supply and demand, with the demand side largely being a function of general economic activities, levels of prosperity, technology advances, consumer preference, and government policies. On the supply side, prices may be significantly impacted by political events, the actions of OPEC or OPEC+ and other large government resource owners, alternative energy sources, and other factors.

Key Recent Events

Guyana: Liza Destiny, Liza Unity and Prosperity floating production, storage and offloading (FPSO) vessels continued to produce above investment basis capacity in 2025. Yellowtail entered service in August and progressed to ramp up throughout the fourth quarter achieving an average gross production of 240 kbd. The combined gross production from the four operating vessels exceeded 870 kbd in the fourth quarter of 2025. With start-up of a fourth vessel, Guyana achieved record annual production in 2025 of 715 kbd. Uaru, and Whiptail, the fifth and sixth developments on the Stabroek Block, respectively, are progressing on schedule and each has an investment basis capacity of approximately 250 kbd. In September 2025, ExxonMobil made a final investment decision for the Hammerhead development, after receiving the required regulatory approvals from the government of Guyana; Hammerhead is anticipated to come online in 2029. We anticipate eight FPSO vessels will be in operation on the Stabroek Block by year-end 2030.

Permian: ExxonMobil delivered strong and efficient growth in Permian production volumes in 2025. Total production volumes averaged a record 1.6 Moebd in 2025, approximately 0.4 Moebd higher than the previous year. ExxonMobil operations continue to deliver industry-leading capital efficiency and cost performance by leveraging scale, integration, and technology. Examples include deploying ExxonMobil cube design and proprietary lightweight proppant as well as leading capabilities and technology in drilling and completions. ExxonMobil expects to increase production in the Permian Basin to approximately 2.5 Moebd by 2030. ExxonMobil remains on track to achieve Scope 1 and 2 net zero greenhouse gas emissions in the integrated Permian Basin operated assets by 2035.

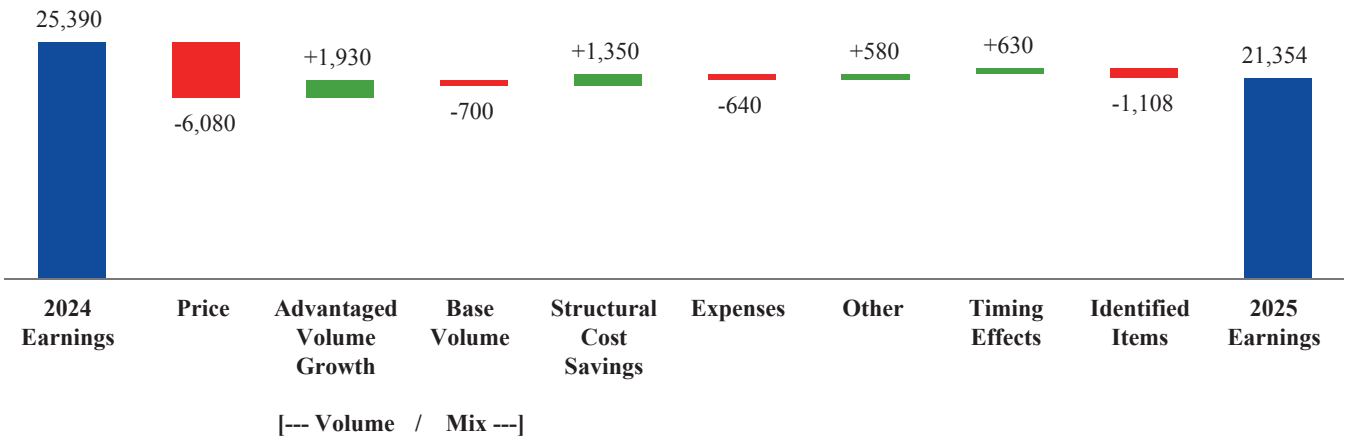

LNG: ExxonMobil continued work on LNG growth projects in 2025. In Papua New Guinea (PNG), the Papua LNG project has been optimizing the development plan and enhancing project cost competitiveness. Force majeure was lifted in Mozambique, as the Rovuma LNG project continues with the front-end engineering and design stage, in support of a final investment decision in 2026 to develop the Area 4 offshore gas resources. Mechanical completion was achieved for the Golden Pass LNG project, with expected first LNG production in the first quarter of 2026.

Upstream Financial Results

2025 Upstream Earnings Driver Analysis [(1)]

(millions of dollars)

Price – Lower realizations decreased earnings by $6.1 billion, primarily driven by lower crude prices as record demand was more than offset by increased industry supply.

Advantaged Volume Growth – Increased earnings by $1.9 billion, mainly driven by record production in Permian and Guyana.

Base Volume – Decreased earnings by $0.7 billion as a result of non-strategic asset divestments.

Structural Cost Savings [(1)] – Increased earnings by $1.4 billion.

Expenses – Decreased earnings by $0.6 billion, primarily higher depreciation from the Tengiz expansion.

Other – Increased earnings by $0.6 billion, mainly driven by favorable tax and foreign exchange impacts.

Timing Effects – Favorable timing effects from derivatives mark-to-market impacts increased earnings by $0.6 billion.

Identified Items [(1)] – 2024 $0.2 billion gain mainly due to Argentina divestment, partly offset by Nigeria divestment and U.S. impairment; 2025 $(0.9) billion loss mainly due to asset impairments.

[(1)] *Refer to Frequently Used Terms for definition of Structural Cost Savings, Identified Items, and Earnings (loss) excluding Identified Items.*

2024 Upstream Earnings Driver Analysis [1]

(millions of dollars)

Price – Price impacts decreased earnings by $1.3 billion, driven by lower gas realizations.

Advantaged Volume Growth – Higher volumes from advantaged assets increased earnings by $3.8 billion, as a result of record production in Permian, driven by the Pioneer acquisition and growth in the heritage Permian [2], and record production in Guyana driven by the Prosperity FPSO start-up.

Base Volume – Divestments of non-strategic assets and entitlements decreased earnings by $0.8 billion.

Structural Cost Savings [1] – Increased earnings by $0.8 billion.

Expenses – Higher expenses decreased earnings by $1.4 billion, primarily from higher depreciation (non-cash).

Other – All other items increased earnings by $0.1 billion, mainly driven by favorable impacts from divestments, partially offset by unfavorable tax and foreign exchange impacts.

Timing Effects – Less unfavorable timing effects from derivatives mark-to-market impacts increased earnings by $0.3 billion.

Identified Items [1] – 2023 $(2.3) billion loss primarily due to the impairment of the idled Santa Ynez Unit assets and associated facilities in California; 2024 $0.2 billion gain mainly due to Argentina divestment, partly offset by Nigeria divestment and U.S. impairment.

[1] *Refer to Frequently Used Terms for definition of Structural Cost Savings, Identified Items, and Earnings (loss) excluding Identified Items.*

[2] *Heritage Permian Basin assets exclude assets acquired as part of the acquisition of Pioneer that closed May 3, 2024.*

Upstream Additional Information

(thousands of barrels daily)	2025	2024
Volumes Reconciliation (Oil-equivalent production) [(1)]		
Prior Year	4,333	3,738
Entitlements - Net Interest	(33)	(13)
Entitlements - Price / Spend / Other	45	(23)
Government Mandates	(1)	9
Divestments	(133)	(63)
Growth / Other	525	685
Current Year	**4,736**	**4,333**

[(1)] *Natural gas is converted to an oil-equivalent basis at six million cubic feet per one thousand barrels.*

2025 versus 2024	2025 production of 4.7 million oil-equivalent barrels per day increased 403 thousand barrels per day from 2024. Permian reached 1.6 million net oil-equivalent barrels per day and Guyana production exceeded 700 thousand gross oil-equivalent barrels per day, more than offsetting impacts from divestments and entitlements. Excluding the impacts from entitlements, divestments, and government-mandated curtailments, net production grew by 525 thousand oil-equivalent barrels per day.
2024 versus 2023	2024 production of 4.3 million oil-equivalent barrels per day increased 595 thousand barrels per day from 2023. Permian and Guyana production grew by 680 thousand oil-equivalent barrels per day, more than offsetting impacts from divestments and entitlements. Excluding the impacts from entitlements, divestments, and government-mandated curtailments, net production grew by 685 thousand oil-equivalent barrels per day.

Listed below are descriptions of ExxonMobil's volumes reconciliation drivers, which are provided to facilitate understanding of the terms.

Entitlements - Net Interest are changes to ExxonMobil's share of production volumes caused by non-operational changes to volume-determining drivers. These drivers consist of net interest changes specified in Production Sharing Contracts (PSCs), which typically occur when cumulative investment returns or production volumes achieve defined thresholds, changes in equity upon achieving pay-out in partner investment carry situations, equity redeterminations as specified in venture agreements, or as a result of the termination or expiry of a concession. Once a net interest change has occurred, it typically will not be reversed by subsequent events, such as lower crude oil prices.

Entitlements - Price, Spend and Other are changes to ExxonMobil's share of production volumes resulting from temporary changes to non-operational volume-determining drivers. These drivers include changes in oil and gas prices or spending levels from one period to another. According to the terms of contractual arrangements or government royalty regimes, price or spending variability can increase or decrease royalty burdens and/or volumes attributable to ExxonMobil. For example, at higher prices, fewer barrels are required for ExxonMobil to recover its costs. These effects generally vary from period to period with field spending patterns or market prices for oil and natural gas. Such drivers can also include other temporary changes in net interest as dictated by specific provisions in production agreements.

Government Mandates are changes to ExxonMobil's sustainable production levels as a result of production limits or sanctions imposed by governments.

Divestments are reductions in ExxonMobil's production arising from commercial arrangements to fully or partially reduce equity in a field or asset in exchange for financial or other economic consideration.

Growth and Other drivers comprise all other operational and non-operational drivers not covered by the above definitions that may affect volumes attributable to ExxonMobil. Such drivers include, but are not limited to, production enhancements from project and work program activities, acquisitions including additions from asset exchanges, downtime, market demand, natural field decline, and any fiscal or commercial terms that do not affect entitlements.

Energy Products

ExxonMobil's Energy Products is one of the largest, most integrated businesses of its kind among international oil companies, with significant representation across the entire fuels value chain, including refining, logistics, trading, and marketing. This segment includes the fuels, aromatics, and NGL value chains, as well as catalysts and licensing.

With the largest refining footprint among international oil companies, ExxonMobil's Energy Products earnings are closely tied to industry refining margins. Refining margins are largely driven by differences in commodity prices and are a function of the difference between what a refinery pays for its raw materials and the market prices for the products produced. Crude oil and many products are widely traded with published prices, including those quoted on multiple exchanges around the world (e.g., New York Mercantile Exchange and Intercontinental Exchange). Prices for these commodities are determined by the global marketplace and are influenced by many factors, including global and regional supply/demand balances, inventory levels, industry refinery operations, import/export balances, currency fluctuations, seasonal demand, weather, and geopolitical considerations. While industry refining margins significantly impact Energy Products earnings, strong operational performance, product mix optimization, and disciplined cost control are also critical to strong financial performance.

In 2025, refining margins increased from the prior year on record demand, but remained within the 10-year historical range (2010-2019). Refining margins are expected to remain volatile with changes in global factors, including geopolitical developments; demand growth; recession fears; inventory levels; and refining capacity utilization, additions, and rationalizations.

Key Recent Events

Strathcona Renewable Diesel project: Started up the project at the Strathcona refinery, which is designed to use low-carbon hydrogen, locally-sourced and grown feedstocks, and our proprietary catalyst to produce renewable diesel.

Fawley Hydrofiner project: Started up the project at the Fawley site to increase production of ultra-low sulfur diesel and reduce production of other products, including high-sulfur distillates.

France divestment: In November 2025, ExxonMobil completed the divestments of Esso Société Anonyme Française SA and ExxonMobil Chemical France SAS, including the refinery and related assets.

2025 Energy Products Earnings Driver Analysis [(1)]

(millions of dollars)

Margin – Increased earnings by $1.8 billion, mainly driven by robust demand and supply disruptions.

Advantaged Volume Growth – Higher volumes from advantaged projects growth increased earnings by $0.2 billion.

Base Volume – Higher volumes driven by lower scheduled maintenance increased earnings by $0.4 billion.

Structural Cost Savings [(1)] – Increased earnings by $0.6 billion.

Expenses – Decreased earnings by $0.5 billion, mainly driven by growth projects.

Other – Increased earnings by $0.2 billion mainly from favorable year-end inventory effects.

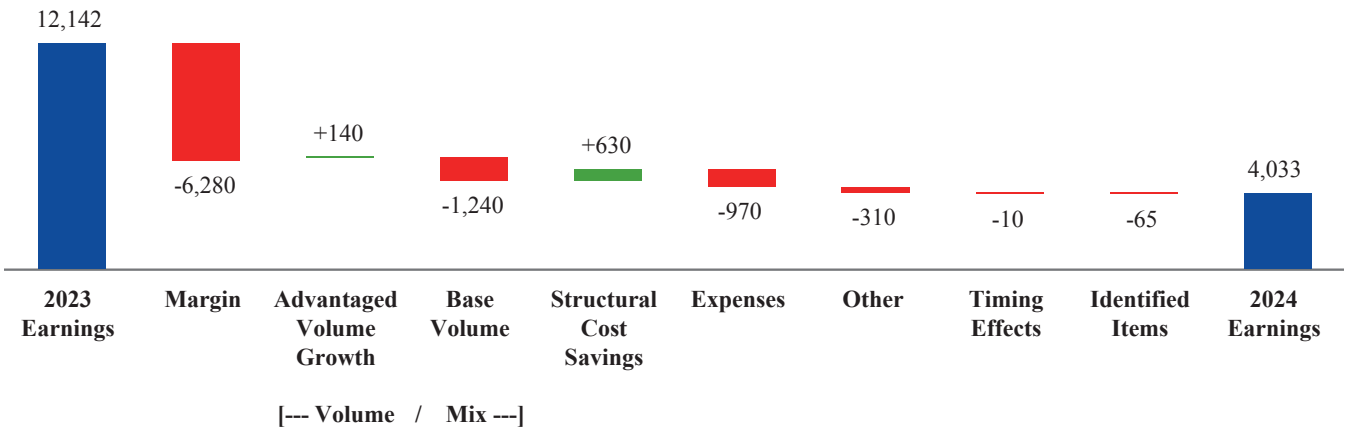

Timing Effects – Favorable timing effects from derivatives mark-to-market impacts increased earnings by $0.4 billion.

Identified Items [(1)] – 2024 $0.1 billion gain; 2025 $0.5 billion gain mainly driven by asset sales.

[(1)] Refer to Frequently Used Terms for definition of Structural Cost Savings, Identified Items, and Earnings (loss) excluding Identified Items.

2024 Energy Products Earnings Driver Analysis [1]

(millions of dollars)

Margin – Significantly weaker industry refining margins decreased earnings by $6.3 billion. Margins declined from historically high levels as increased supply from industry capacity additions outpaced record global demand.

Advantaged Volume Growth – Higher volumes from advantaged projects, increased earnings by $0.1 billion.

Base Volume – Lower base volumes decreased earnings by $1.2 billion driven by scheduled maintenance and divestments.

Structural Cost Savings [1] – Increased earnings by $0.6 billion.

Expenses – Higher expenses related to scheduled turnarounds and maintenance, and advantaged project spend decreased earnings by $1.0 billion.

Other – All other items, mainly unfavorable tax and forex impacts, decreased earnings by $0.3 billion.

Timing Effects – Decreased earnings by $10 million.

Identified Items [1] – 2023 $0.1 billion gain driven by favorable tax effects partially offset by additional European taxes on the energy sector; 2024 $0.1 billion gain.

Chemical Products

ExxonMobil is a leading global manufacturer and marketer of petrochemicals that support modern living. Chemical Products help meet society's essential needs by providing a wide range of innovative products efficiently and responsibly. The Company is uniquely positioned with a combination of industry-leading scale, integration, and proprietary technology, which are fundamental to producing affordable products that are more sustainable, use less material, save energy, and reduce waste. These competitive advantages are underpinned by operational excellence, advantaged investments, and cost discipline. This segment includes olefins, polyolefins, and intermediates.

Over the long term, worldwide demand for chemicals is expected to grow faster than the overall economy, driven by global population growth, an expanding middle class, and improving living standards. Chemical Products integration with refineries, performance product mix, and project execution capability improves returns on investments across a range of market environments.

In 2025, chemical industry margins remained deeply bottom-of-cycle, below the 10-year historical range (2010-2019), as capacity additions have far exceeded demand growth. The Company optimized production across our global footprint to profitably meet customer demand. Our earnings benefited from solid reliability, record high-value products sales, and a large North American footprint where low ethane prices continue to provide a feed advantage.

Key Recent Events

China Chemical Complex: Started up a petrochemical complex in the Dayawan Petrochemical Industrial Park in Huizhou, Guangdong Province, which is a significant step in growing our global manufacturing footprint and is the first 100 percent foreign-owned petrochemical complex built in China. The facility, which focuses on producing our unique high-performance polyethylene and polypropylene products, is equipped with three polyethylene and two polypropylene production lines for a combined capacity of over 2.5 million metric tons per year. This capacity will more efficiently serve China's large and evolving domestic demand, which is currently being met with imports.

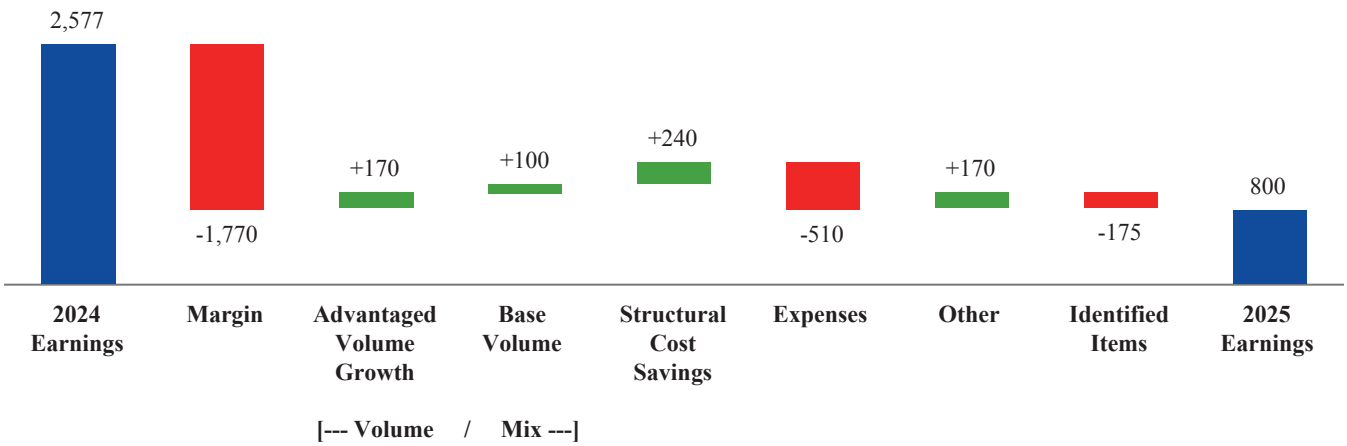

Advanced Recycling: ExxonMobil is combining proprietary technology and advantaged integrated sites to process hard-to-recycle plastic waste back into raw materials to produce valuable new products. In 2025, the Company added two new advanced recycling units to the Baytown facility, tripling capacity at the site, and representing one of the largest advanced recycling facilities in North America. Additional units are being assessed as the Company aims to reach a global recycling capacity of 1 billion pounds per year to help reduce plastic waste.

Specialty Products

ExxonMobil Specialty Products is a combination of business units that manufacture and market a range of performance products, including high-quality lubricants, basestocks, waxes, synthetics, elastomers, and resins. Leveraging ExxonMobil's proprietary technologies, Specialty Products focuses on providing performance products that help customers improve efficiency in the transportation and industrial sectors.

Specialty Products is well-positioned to help meet the demand for premium lubricant products through advantaged projects that leverage ExxonMobil's integration, technology, and world-class brands, such as Mobil 1™.

In 2025, Specialty Products continued to deliver strong earnings from our portfolio of high-value products and brand market position.

Key Recent Events

Singapore Resid Upgrade project: This project started up in 2025, leveraging two proprietary technologies to upgrade fuel oil to Group II lubricant basestock and diesel. It further strengthens ExxonMobil's position as the largest basestock producer in the world and introduces a first-of-its-kind basestock, EHC 340 MAX™, with superior performance attributes, to the market.

Proxxima™ Resin Systems: ExxonMobil's advanced polyolefin thermoset resin uses components of gasoline and catalyst technology to create a material that is lighter, stronger, and more durable than conventional products, providing alternatives for the construction, coatings, and transportation industries. These systems are designed to drive product substitutions in existing markets and enable expansion into new applications like structural composites and steel substitutes. In 2025, ExxonMobil more than tripled Proxxima™ resin blending capacity with plans to grow production to 200,000 tons per year by 2030.

Carbon Materials venture: ExxonMobil is growing its carbon materials venture by applying proprietary process technology to capture attractive opportunities in the battery anode market. The Company has developed an advanced coke product by converting low-value, bottom-of-the-barrel molecules that can deliver a higher performance differentiated graphite. These carbon materials enable batteries that can provide up to 30 percent higher available capacity, 30 percent faster charging time, and extended battery life. In 2025, ExxonMobil acquired key technology and assets from Superior Graphite. This acquisition, which complements ExxonMobil's process technology and expertise, enables a faster scale-up and a swifter entry into the battery anode market with our differentiated graphite product.

Effect of exchange rate changes	532	(676)	105
Increase/(decrease) in cash and cash equivalents	**(12,506)**	**(8,381)**	**1,903**
Total cash and cash equivalents (December 31)	**10,681**	**23,187**	**31,568**

Total cash and cash equivalents were $10.7 billion at the end of 2025, down $12.5 billion from the prior year. The major sources of funds in 2025 were net income including noncontrolling interests of $29.8 billion, the adjustment for the noncash provision of $26.0 billion for depreciation and depletion, proceeds from asset sales of $3.2 billion, and other investing activities of $3.4 billion. The major uses of funds included spending for additions to property, plant, and equipment of $28.4 billion; dividends to shareholders of $17.2 billion; the purchase of ExxonMobil stock of $20.3 billion; additional investments and advances of $4.1 billion; and a change in working capital of $7.7 billion.

Total cash and cash equivalents were $23.2 billion at the end of 2024, down $8.4 billion from the prior year. The major sources of funds in 2024 were net income including noncontrolling interests of $35.1 billion, the adjustment for the noncash provision of $23.4 billion for depreciation and depletion, proceeds from asset sales of $5.0 billion, and other investing activities of $1.9 billion, and cash acquired from mergers and acquisitions of $0.8 billion. The major uses of funds included spending for additions to property, plant, and equipment of $24.3 billion; dividends to shareholders of $16.7 billion; the purchase of ExxonMobil stock of $19.6 billion; debt repayment of $5.9 billion; additional investments and advances of $3.3 billion; and a change in working capital of $1.8 billion.

The Corporation has access to significant capacity of long-term and short-term liquidity. Internally generated funds are expected to cover the majority of financial requirements, supplemented by long-term and short-term debt. Commercial paper is used to balance short-term liquidity requirements and is reflected in "Notes and loans payable" on the Consolidated Balance Sheet, with changes in outstanding commercial paper between periods included in the Consolidated Statement of Cash Flows. On December 31, 2025, the Corporation had undrawn short-term committed lines of credit of $7.3 billion and undrawn long-term lines of credit of $1.0 billion. In the fourth quarter of 2025, the Corporation established a 364-day revolving credit facility of $7.0 billion to provide short-term borrowing capacity for general corporate purposes.

To support cash flows in future periods, the Corporation will need to continually find or acquire and develop new fields, and continue to develop and apply new technologies and recovery processes to existing fields, in order to maintain or increase production. After a period of production at plateau rates, it is the nature of oil and gas fields to eventually produce at declining rates for the remainder of their economic life. Decline rates can vary widely by individual field due to a number of factors, including, but not limited to, the type of reservoir, fluid properties, recovery mechanisms, work activity, and age of the field. In particular, the Corporation's key tight-oil plays have higher initial decline rates which tend to moderate over time. Furthermore, the Corporation's net interest in production for individual fields can vary with price and the impact of fiscal and commercial terms.

The Corporation has long been successful at mitigating the effects of natural field decline through disciplined investments in quality opportunities and project execution. The Corporation anticipates several projects will come online over the next few years providing additional production capacity. However, actual volumes will vary from year to year due to the timing of individual project start-ups, operational outages, reservoir performance, regulatory changes, the impact of fiscal and commercial terms, asset sales, weather events, price effects on production sharing contracts, changes in the amount and timing of investments that may vary depending on the oil and gas price environment, and international trade patterns and relations. The Corporation's cash flows are also highly dependent on crude oil and natural gas prices. Please refer to Item 1A for a more complete discussion of risks.

The Corporation's financial strength enables it to make large, long-term capital expenditures. Cash Capex in 2025 was $29.0 billion, including $2.6 billion of acquisitions, reflecting the Corporation's continued active investment program.

Upstream spending of $24.7 billion in 2025 was up $4.4 billion from 2024, reflecting higher spend in the U.S. Permian Basin which included the full-year impact from the Pioneer acquisition. Development projects typically take several years from the time of recording proved undeveloped reserves to the start of production and can exceed five years for large and complex projects. The percentage of proved developed reserves was 64 percent of total proved reserves at year-end 2025 and has been over 60 percent for the last ten years.

Capital investments in the three Product Solutions businesses totaled $3.7 billion in 2025, a decrease of $0.8 billion from 2024, reflecting lower global project spending. Other spend of $0.6 billion primarily reflects investments in the Low Carbon Solutions business.

The Corporation plans to invest in the range of $27 billion to $29 billion in 2026. The investment range for 2026 excludes advances and collections not related to capital expenditures or equity investments, for example, supply and marketing related advances and associated collections. Included in the 2026 capital spend range is $8.5 billion of firm capital commitments. An additional $8.0 billion of firm capital commitments have been made for years 2027 and beyond. Actual spending could vary depending on the progress of individual projects and property acquisitions. The Corporation has a large and diverse portfolio of development projects and exploration opportunities, which helps mitigate the overall political and technical risks of the Corporation's Upstream segment and associated cash flow. Further, due to its financial strength and diverse portfolio of opportunities, the risk associated with failure or delay of any single project would not have a significant impact on the Corporation's liquidity or ability to generate sufficient cash flows for operations and its fixed commitments.

The Corporation, as part of its ongoing asset management program, continues to evaluate its mix of assets for potential upgrade. Because of the ongoing nature of this program, dispositions will continue to be made from time to time which will result in either gains or losses. Additionally, the Corporation continues to evaluate opportunities to enhance its business portfolio through acquisitions of assets or companies and enters into such transactions from time to time. Key criteria for evaluating acquisitions include strategic fit, cost and other synergies, potential for future growth, low cost of supply, and attractive valuations. Acquisitions may be made with cash, shares of the Corporation's common stock, or both.

Cash Flow from Operating Activities

2025

Cash provided by operating activities totaled $52.0 billion in 2025, $3.1 billion lower than 2024. The major source of funds was net income including noncontrolling interests of $29.8 billion, a decrease of $5.3 billion. The noncash provision for depreciation and depletion was $26.0 billion, up $2.6 billion from the prior year. The adjustment for the net gain on asset sales was $1.1 billion, a decrease of $0.1 billion. The adjustment for dividends received less than equity in current earnings of equity companies was an increase of $3.0 billion, compared to an increase of $0.2 billion in 2024. Changes in operational working capital, excluding cash and debt, decreased cash in 2025 by $7.7 billion.

2024

Cash provided by operating activities totaled $55.0 billion in 2024, $0.3 billion lower than 2023. The major source of funds was net income including noncontrolling interests of $35.1 billion, a decrease of $2.3 billion. The noncash provision for depreciation and depletion was $23.4 billion, up $2.8 billion from the prior year. The adjustment for the net gain on asset sales was $1.2 billion, an increase of $0.7 billion. The adjustment for dividends received less than equity in current earnings of equity companies was an increase of $0.2 billion, compared to an increase of $0.5 billion in 2023. Changes in operational working capital, excluding cash and debt, decreased cash in 2024 by $1.8 billion.

Cash Flow from Investing Activities

2025

Cash used in investing activities netted to $25.9 billion in 2025, $6.0 billion higher than 2024. Spending for property, plant, and equipment of $28.4 billion increased $4.1 billion from 2024. Proceeds from asset sales and returns of investments of $3.2 billion compared to $5.0 billion in 2024. Additional investments and advances were $0.8 billion higher in 2025, while proceeds from other investing activities including collection of advances increased by $1.5 billion.

2024

Cash used in investing activities netted to $19.9 billion in 2024, $0.7 billion higher than 2023. Spending for property, plant, and equipment of $24.3 billion increased $2.4 billion from 2023. Proceeds from asset sales and returns of investments of $5.0 billion compared to $4.1 billion in 2023. Additional investments and advances were $0.3 billion higher in 2024, while proceeds from other investing activities including collection of advances increased by $0.4 billion.

CONSOLIDATED STATEMENT OF INCOME

[1] Includes restricted shares not vested as well as 545 million shares issued for the Pioneer acquisition on May 3, 2024.

[2] The earnings (loss) per common share and earnings (loss) per common share - assuming dilution are the same in each period shown.

Note 3. Disclosures about Segments and Related Information

Our four reportable segments are Upstream, Energy Products, Chemical Products, and Specialty Products. The factors used to identify these reportable segments are based on the nature of the operations that are undertaken by each segment and reflect the nature of internal reviews by our Management Committee (MC). The MC is considered collectively, and not in their individual capacity, to be our Chief Operating Decision Maker (CODM), and includes our CEO, CFO, and two Senior Vice Presidents serving as contact executives overseeing the Upstream and Product Solutions businesses.

The Upstream segment is organized to explore for and produce crude oil and natural gas. Product Solutions consists of the Energy Products, Chemical Products, and Specialty Products segments, which are organized to manufacture and sell petroleum products and petrochemicals.

- Energy Products: Fuels, aromatics, and catalysts and licensing
- Chemical Products: Olefins, polyolefins, and intermediates
- Specialty Products: Finished lubricants, basestocks and waxes, synthetics, and elastomers and resins

The CODM generally allocates resources through an annual planning process. They also allocate capital based on detailed project economics and long-term strategic objectives across reportable segments. The CODM primarily uses changes in Net income (loss) attributable to ExxonMobil to assess segment financial performance.

Net income (loss) attributable to ExxonMobil includes transfers at estimated market prices. In Corporate and Financing, interest revenue relates to interest earned on cash deposits and marketable securities. Interest expense includes non-debt-related interest expense of $0.3 billion in 2025, $0.4 billion in 2024, and $0.2 billion in 2023.

RECONCILIATION OF 2024 EARNINGS GROWTH AT CONSTANT PRICES AND MARGINS

		Product Solutions				
	Upstream	Energy Prod	Chemical Prod	Specialty Prod	Corp & Fin	2024
Earnings (U.S. GAAP)	**25.4**	**4.0**	**2.6**	**3.1**	**(1.4)**	**33.7**
Identified items[1]	0.2	0.1	(0.1)	(0.0)	0.0	0.2
Earnings ex. identified items (non-GAAP)	**25.2**	**4.0**	**2.7**	**3.1**	**(1.4)**	**33.5**
Adjustments to 2024 $65/bbl real Brent and 10-year average Energy, Chemical, and Specialty Product margins	(9.4)	(0.8)	1.4	(0.8)	0.0	(9.6)
Earnings ex. identified items and adjusted to 2024 $65/bbl Brent and 10-year average Energy, Chemical, and Specialty Products margins (non-GAAP), or as labeled "2024 Earnings growth at constant prices and margins"	**15.8**	**3.2**	**4.1**	**2.3**	**(1.4)**	**24.0**

The 2024 reconciliation provides the baseline for measuring future growth at constant prices and margins under the current plan.

1. Identified items in 2024 include asset management, impairments, and Tax/Other items. Due to rounding, numbers presented above may not add up precisely to the totals indicated.

RECONCILIATION OF 2024 CASH FLOW GROWTH AT CONSTANT PRICES AND MARGINS

	2024
Earnings (U.S. GAAP)	**33.7**
Identified items[1]	0.2
Earnings ex. identified items (non-GAAP)	**33.5**
Adjustment to 2024 $65/bbl real Brent and 10-year average Energy, Chemical, and Specialty Products margins	(9.6)
Earnings ex. identified items and adjusted to 2024 $65/bbl real Brent and 10-year average Energy, Chemical, and Specialty Products margins (non-GAAP)	**24.0**
Plus depreciation, ex. identified items[1]	23.0
Cash flow from operating activities, ex. identified items (excluding working capital/other) and adjusted to 2024 $65/bbl real Brent and 10-year average Energy, Chemical, and Specialty Products margins (non-GAAP), or as labeled "2024 Cash flow (CFO) growth at constant prices and margins"	**47.0**

The 2024 reconciliation provides the baseline for measuring future growth at constant prices and margins under the current plan.
For clarity, Cash flow growth at constant prices and margins excludes working capital/other.

1. Identified items in 2024 include asset management, impairments, and Tax/Other items. Due to rounding, numbers presented above may not add up precisely to the totals indicated.

FOOTNOTES (Pages I-V and 139)

Page I

1. For definitions and reconciliations, see Frequently Used Terms starting on page 31 of ExxonMobil's 2025 Form 10-K, which forms part of this report. Unless stated otherwise, IOCs include each of BP, Chevron, Shell, and TotalEnergies. IOCs' structural cost savings reflect recorded cost savings from public filings. Total shareholder returns compares to each IOC as of December 31, 2025. ExxonMobil leads IOCs in ROCE comparing the average of the last six years. Historic ROCE for IOCs is based on public filings and adjusted to a calculation basis consistent with ExxonMobil. 2025 ROCE is estimated using available year-to-date third-quarter annualized figures.
2. Our workforce Lost-Time Incident Rate (LTIR) for 2020-2025 was 0.02 per 200,000 work hours, based on ExxonMobil 2020, 2021, 2022, 2023, 2024, and 2025 full-year performance data as of January 14, 2026. Performance data may include rounding. Incidents include injuries and illnesses. ExxonMobil workforce includes employees, contractors, and recent acquisitions (Denbury data beginning November 2, 2023, and Pioneer data beginning May 3, 2024).
3. Industry benchmark: International Association of Oil & Gas Producers (IOGP) safety performance indicators and American Fuel & Petrochemical Manufacturers (AFPM) Report of Occupational Injuries and Illnesses are the Upstream and Downstream industry benchmarks, respectively. IOGP safety performance indicators data converted from incidents per 1,000,000 work hours to incidents per 200,000 work hours. ExxonMobil analysis of data published by AFPM and IOGP. 2025 industry data not available at time of publication. Performance data may include rounding.
4. In addition, see publicly available data for industry peer comparators Chevron, Shell, and TotalEnergies reported on a per million hour work basis and converted to 200,000 work hours basis for comparison, 2020-2024.
5. 2025 performance is based on 4Q 2025 preliminary data. ExxonMobil's plans regarding GHG emissions reductions by 2030 can be found in our 2025 Advancing Climate Solutions report. Methane intensity reductions plans are expected to be achieved by the end of 2026.

6. 2x increase in Pioneer synergies based on current estimate compared to original deal basis shared on October 11, 2023 (Merger of ExxonMobil and Pioneer).
7. "End-to-end CCS system" entails integration of CO_2 capture, transportation, and storage. Based on contracts to move up to 8.7 MTA CO_2 starting in 2025, subject to additional investment by ExxonMobil and receipt of government permitting for carbon capture and storage projects.
8. ExxonMobil had the sixth-largest total distributions of S&P 500 companies over the cumulative period of 2021 to 2025 when compared to actuals data of dividends and share repurchases sourced from Bloomberg.
9. ExxonMobil has led IOCs in ROCE when comparing the average of the last 2, 3, 4, 5, and 6 years. Historic ROCE for IOCs is based on public filings and adjusted to a calculation basis consistent with ExxonMobil. 2025 ROCE is estimated using available year-to-date third-quarter annualized figures. ExxonMobil's plans to improve ROCE to >17% by 2030 are on a constant price and margin basis, which is adjusted to 2024 $65/bbl real Brent (assumes annual inflation of 2.5%) and 10-year average Energy, Chemical, and Specialty Product margins, which refer to the average of annual margins from 2010-2019. It also assumes a $5 billion minimum cash balance.
10. Earnings and cash flow growth plans are based on Earnings growth at constant prices and margins and Cash flow growth at constant prices and margins, which exclude identified items and are adjusted to 2024 $65/bbl real Brent (assumes annual inflation of 2.5%) and 10-year average Energy, Chemical, and Specialty Product margins, which refer to the average of annual margins from 2010-2019. Cash flow growth also excludes working capital/other. For reconciliations see page 132 of this report.

1. Earnings growth and cash flow growth refer to Earnings growth at constant prices and margins, and Cash flow growth at constant prices and margins.
2. Earnings growth and cash flow growth refer to Earnings growth at constant prices and margins, and Cash flow growth at constant prices and margins, which exclude identified items and are adjusted to 2024 $65/bbl real Brent (assumes annual inflation of 2.5%) and 10-year average Energy, Chemical, and Specialty Product margins, which refer to the average of annual margins from 2010-2019. Cash flow growth also excludes working capital/other. For reconciliations, see page 133 of this report.
3. For definitions and more information on Structural Cost Savings, see page 33 of ExxonMobil's 2025 From 10-K, which forms part of this report.
4. ExxonMobil's plans to improve ROCE to >17% by 2030 are on a constant price and margin basis, which is adjusted to 2024 $65/bbl real Brent (assumes annual inflation of 2.5%) and 10-year average Energy, Chemical, and Specialty Product margins, which refer to the average of annual margins from 2010-2019. It also assumes a $5 billion minimum cash balance.
5. Earnings growth refers to Earnings growth at constant prices, which excludes identified items and is adjusted to 2024 $65/bbl real Brent (assumes annual inflation of 2.5%). See reconciliations on page 133 of this report.
6. Earnings growth refers to Earnings growth at constant margins, which excludes identified items and is adjusted to 10-year average Energy, Chemical, and Specialty Product margins, which refer to the average of annual margins from 2010-2019. See reconciliations on page 133 of this report.
7. Based on contracts to move up to 8.7 MTA CO_2 starting in 2025, subject to additional investment by ExxonMobil and receipt of government permitting for carbon capture and storage projects.
8. Lower emissions investments include cash capex attributable to carbon capture and storage, hydrogen, lithium, biofuels, Proxxima™ resin systems, carbon materials, and activities to lower ExxonMobil's emissions and/or third-party emissions.

Exxon Mobil Corporation has numerous affiliates, many with names that include ExxonMobil, Exxon, Mobil, Esso, and XTO. For convenience and simplicity, those terms and terms such as Corporation, company, our, we, and its are sometimes used as abbreviated references to specific affiliates or affiliate groups. Similarly, ExxonMobil has business relationships with thousands of customers, suppliers, governments, and others. For convenience and simplicity, words such as venture, joint venture, partnership, co-venturer, and partner are used to indicate business and other relationships involving common activities and interests, and those words may not indicate precise legal relationships. ExxonMobil's ambitions, plans and goals do not guarantee any action or future performance by its affiliates or Exxon Mobil Corporation's responsibility for those affiliates' actions and future performance, each affiliate of which manages its own affairs.

The following are trademarks, service marks, or proprietary process names of Exxon Mobil Corporation or one of its affiliates: *Exxon, ExxonMobil, ExxonMobil Low Carbon Solutions, Mobil, Mobil 1, and Proxxima.*

In a league of our own

Corporate Plan through 2030

Advantages delivering growth

Execution and portfolio improvements are increasing earnings and cash flow growth potential through 2030.[1] Disciplined investment in advantaged opportunities continues to strengthen returns and resilience across cycles.

~$25B earnings growth between 2024 and 2030[2]

25/35 by 2030

~$35B cash flow growth between 2024 and 2030[2]

Both $5B higher than in prior-year plan

~$20B structural cost savings by 2030 vs. 2019[3]

>17% return on capital employed by 2030[4]

Our plan for delivering profitable growth and shareholder value far into the future

Investing in an unmatched portfolio of high-value opportunities

Accelerating deployment of proprietary technology in a variety of products and markets

Delivering industry-leading execution and cost management

Creating leading shareholder value and sharing success with shareholders

Upstream

>$14B

earnings growth by 2030 vs. 2024[5]

~65%

of production from advantaged assets by 2030

Product Solutions

>$9B

earnings growth by 2030 vs. 2024[6]

Majority of growth comes from high-value products serving growing global demand

Low Carbon Solutions

~9 MTA

CO_2 under contract with third parties[7]

Building large-scale carbon capture and storage networks for industrial customers

Across our portfolio

~$20B

lower-emission investments pursued between 2025 and 2030[8]

Pacing aligned with policy support and market development
